PROF. ANITHA A-SITE

VIT CRICKET LEAGUE MANAGEMENT SYSTEM –v1

1.ABSTRACT

Cricket league has been a very famous tournament in Vellore institute of technology and many other. Being a part of VIT cricket tournament that has been conducted every year fall semester there has never been a proper maintenance of players played in that tournament and also the teams that have participated in that tournament. The following application will provide a application that can maintain record of players playing in each year of the tournament and also list of teams that has participated in the tournament.

2.AIM AND OBJECT OF THE PROJECT

This Java app provides an interface for VIT administration to maintain a list of record of teams and also players participating in that tournament and also maintain a list of players who have been removed from the tournament for malpractice and other reasons. The application looks to provide details of teams and also their coach. The application looks provides a direct interface that can be used to see the updating of database. The overall application helps in creating a smooth interface to keep track of a multi-collage tournament.

3.INTRODUCTION

Cricket tournaments are very common in and around collages in India. But most of the collage leagues don't maintain proper record of tournament that happen in their collage and hence these tournaments are considered as normal street matches and sometimes things get out of hand in this kind of tournaments. Sometimes the recorders of students are also not maintained who play in this tournament. Hence it will be really important to organize a tournament with proper documentation.

- The given application is a level1 application which helps in maintaining record of all teams and also students who are participating in this tournament.
- The main application is assigning players to each team in the tournament and also removing player in that team with proper reason.
- The application provides statistics of all players playing in that tournament and also provides an option of maintaining records of players playing in that tournament.

4.PROJECT SPECIFICICATIONS

4.1) HARDWARE SEPCIFICATIONS

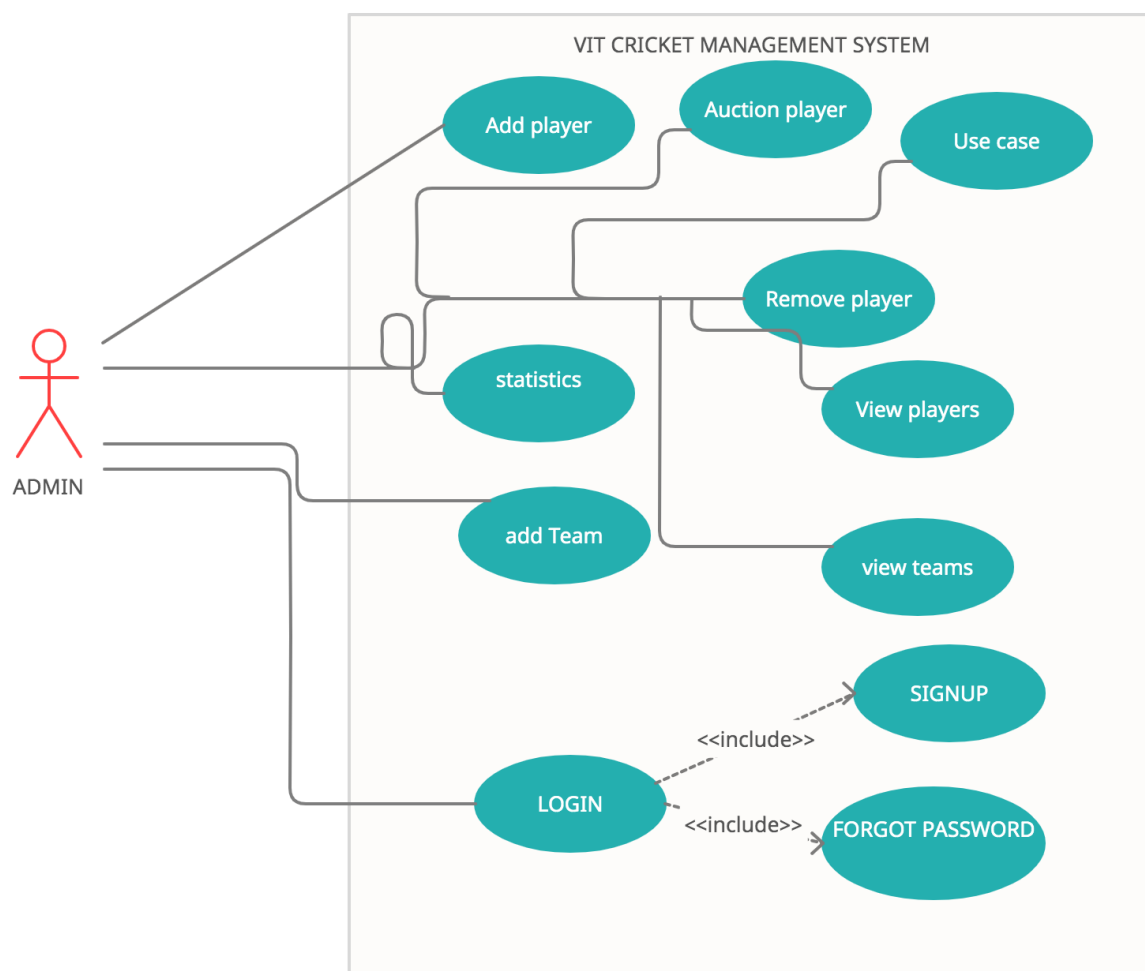

The laptop is a octa-core Intel, PowerPC G7. Requires a minimum of 40MB RAM. 1GB of free disk space is recommended for all necessary downloads including Java swing, JDBC connection and other libraries.

4.2) SOFTWARE SPECIFICATIONS

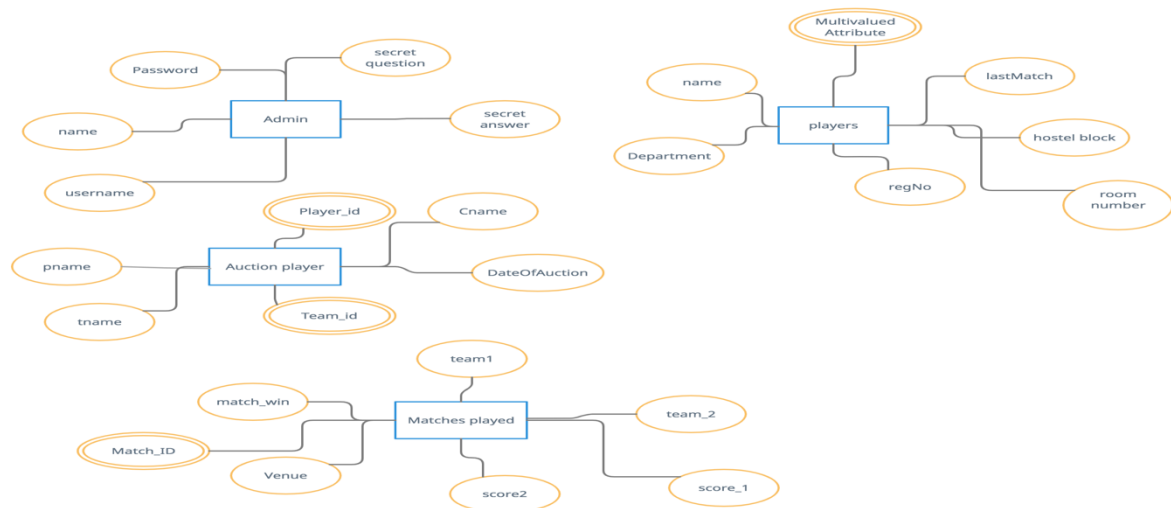

Being a Java Application the tool runs on all operating systems and is truly cross-platform capable. MacOS/Linux/Windows are all compatible as long as they have the Java 14+ SDK and Open SDK installed with them. Also a local MySQL database installed natively or with some other package installer.

5.ARCHITECTURE DIAGRAMS

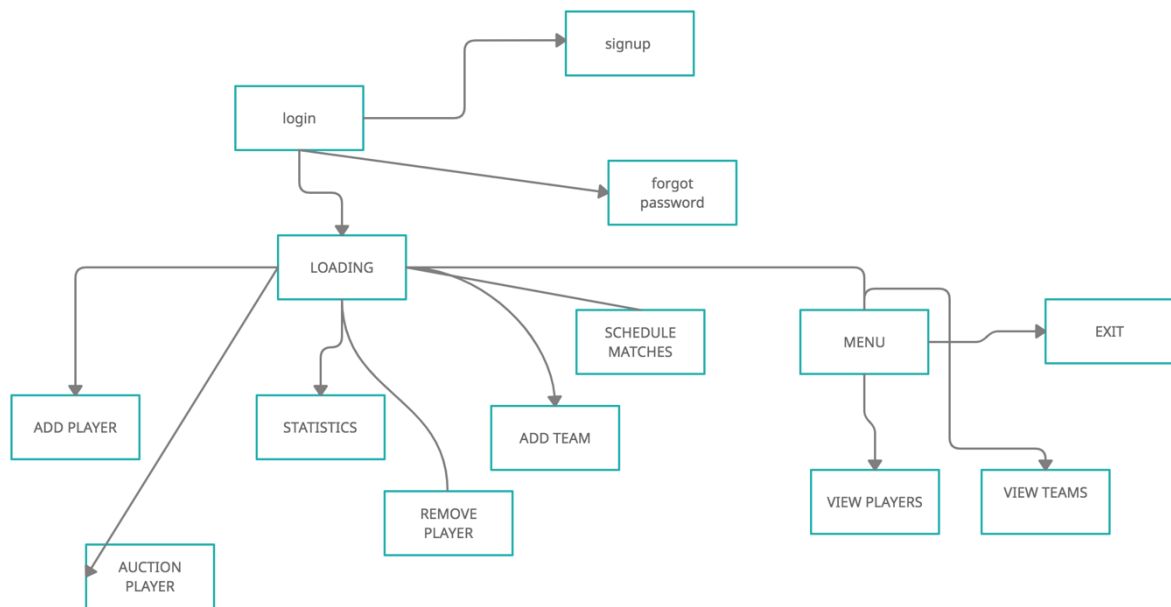

5.1) Use case diagram

5.2) Short ER diagram

5.3) Pages

6.MODULES IN THE PROJECT(14 frames)

- 1) **About Me:** Provides a small description of the version of the project and also the creator of the project.
- 2) **Add Players:** Is a page where the students can register their details and register for the tournament.
- 3) **Add Team:** Is a page where new teams from VIT can register and participate in the tournament.
- 4) **Auction Player:** Is a page that assigns players to their team based on auction and based on request of players.
- 5) **Forgot Password:** Helps to recover password using secret question and secret key.
- 6) **Home Page:** Contains the main landing page after login of user and provides navigation to all the functionalities.
- 7) **Loading:** It's a page that comes after successful login which provides a loading in a graphical format. On successful completion it is redirected to the home page.
- 8) **Login Page:** Page where the admin can provide user name and password for using the functionality of the website. It also provides options for signup and also recovering password.
- 9) **Player Details:** Provides list of players playing in the tournament and also search option for players based on ID and name and it also provides option of removing player from database.
- 10) **Remove Players:** Helps in removing player from the team and also helps in cleaning auction player list so that the player can be removed from the team and also the player can be auctioned to another team.
- 11) **Schedule Matches:** It helps in keeping record of completed matches and keeps score of teams and also the team that won the match.
- 12) **Sign Up:** Helps for new admin to register so that they can use this application.
- 13) **Statistics:** Provides list of players playing in this tournament and also list of matches completed in the tournament.
- 14) **Team Details:** Provides option of viewing teams and also searching teams based on their team ID and also name of the team. There is also an option of removing the team from the database.

8. RESULTS AND DISCUSSION

Through this project I have created a minimal application that can be used by VIT administration to conduct an inter-collage cricket league tournament with all the record of student participation and also maintain list of faculty's who take care of each and every team so that the league happens in a safe and proper manner.

In the future version of this project we can add statistics of previously played cricket players and also make an auction system where team can bid for the player they want with the points they have.

9.CONCLUSION

In conclusion we have created a prototype application for cricket league management in Vellore institute of technology using Java swings and MYSQL. We have explained with context and background the scope of an application of this kind along with the flow of data. Appropriate results and a demo has also been performed.
